Nimbus Analytics Product Guide

Welcome to Nimbus. We are pleased to have you here. This guide provides comprehensive instructions covering everything from setting up your initial dashboard to utilizing the API. It is extensive, so please feel free to take your time and navigate to the sections most relevant to you.

Nimbus is a cloud analytics platform that enables you to connect your data, analyze it, and share insights with your team. Since its inception in 2019, over 4,000 companies have adopted it for daily use. Our mission is to make analytics straightforward and effective; should any part of this guide be unclear, we take full responsibility.

Getting Started

Getting started is straightforward. Register at https://nimbus.example/signup, verify your email address, and you will gain access. A credit card is not required for the 14-day trial period, and you may invite up to 5 colleagues immediately.

- 1 Create a workspace and assign it a name recognizable to your team
- 2 Connect your initial data source (Postgres, Snowflake, BigQuery, among others)
- 3 Construct a dashboard using one of our 30 available templates
- 4 Share the dashboard with your team and celebrate your accomplishment

Upon completing these steps, you will have acquired the fundamental skills necessary to use the platform. The remainder of this guide provides a more detailed exploration of each component.

Features

Below is an overview of the principal features. Each feature is detailed in its own section, allowing you to navigate directly to topics of interest.

Dashboards

Dashboards is where many of our users spend the majority of their time, and this is intentional. Most teams we have consulted report that it saves them approximately 7 hours per week, which is quite significant. We have implemented 37 enhancements to this feature this year alone, primarily based on user feedback. You can configure it in about 9 minutes without requiring any coding skills. Please note: administrators can restrict access per workspace if enhanced control is necessary. In summary, we encourage you to try it and evaluate its benefits.

Dashboards offer significant utility once familiarized. Setup typically takes around 29 minutes and requires no coding expertise. The feature integrates seamlessly with existing tools, eliminating the need for replacements. This year, we have introduced 18 improvements, primarily driven by user feedback. For convenience, you may pin Dashboards to your sidebar by selecting the star icon, ensuring quick access. We invite you to try this feature and share your experience with us.

- Available with every plan, although certain limits vary by subscription tier
- Comprehensive documentation is accessible at https://docs.nimbus.example/dashboards
- Keyboard shortcut: press d twice to navigate directly to this section

Dashboards is an indispensable tool that you will soon find essential. For larger teams, it supports collaboration for up to 40 users simultaneously. It can be configured in approximately 6 minutes without any coding required. Most teams we have engaged with report that it saves them roughly 39 hours per week, which is remarkable. Additionally, you may initiate this feature via the CLI if preferred. We invite you to try it and share your feedback; we are eager to hear from you.

Dashboards are a highly valuable feature. Feedback from teams suggests an average time savings of 21 hours per week. Setup typically takes about 29 minutes and requires no coding. The feature integrates well with existing tools, avoiding the need for replacements. It can also be launched from the CLI for users who prefer that method. We recommend exploring this feature and assessing its utility.

Dashboards is where many of our users spend the majority of their day, and this is intentional. For larger teams, it supports collaboration for up to 40 individuals simultaneously. Most teams we have consulted report that it saves them approximately 39 hours per week, which is quite significant. Setup can be completed in approximately 15 minutes, and no coding is required to begin. Please note: administrators have the ability to restrict access on a per-workspace basis if enhanced control is necessary. We encourage you to try it and evaluate its benefits.

Dashboards is an indispensable tool that you will soon find essential. For larger teams, it accommodates up to 34 users working concurrently. Setup typically requires about 37 minutes, with no coding necessary to get started. Feedback from most teams indicates a time savings of approximately 30 hours per week, which is substantial. Additionally, administrators can enforce workspace-specific restrictions if tighter control is desired. We invite you to try it and share your experience with us.

Alerts

Alerts may not initially inspire enthusiasm until experienced firsthand. It is built upon the same robust engine as the rest of Nimbus, ensuring high performance even with datasets containing 14 million rows. It integrates seamlessly with your existing tools, eliminating the need for replacement. Most teams report a time savings of approximately 8 hours per week, which is noteworthy. Additionally, Alerts can be initiated via the command-line interface for those who prefer this method. We are confident you will find it highly beneficial.

Alerts may not initially inspire enthusiasm until experienced firsthand. It is constructed on the same powerful engine as the rest of Nimbus, maintaining speed even with 7 million rows. This year alone, we have implemented 10 enhancements, largely based on user feedback. It integrates smoothly with your existing tools, so no replacements are necessary. Should any issues arise, please contact support for prompt resolution. The system is straightforward and user-friendly.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/alerts
- Keyboard shortcut: press a twice to jump straight here

Alerts is a feature where many users spend a significant portion of their day, which is intentional. Most teams report that it saves them approximately 5 hours per week, a considerable amount. This year, we have introduced 7 improvements, primarily based on user feedback. For larger teams, it supports collaboration for up to 38 users simultaneously. Alerts can also be initiated via the command-line interface for those who prefer this approach. We are confident you will find it highly advantageous.

Alerts is a feature where many users spend a significant portion of their day, which is intentional. It integrates seamlessly with your existing tools, so no replacements are necessary. Built on the same engine as the rest of Nimbus, it maintains high performance even with datasets containing 32 million rows. This year, we have implemented 7 enhancements, largely based on user feedback. A useful tip: click the star icon to pin Alerts to your sidebar for quick access. We are confident you will find it highly beneficial.

Alerts may not initially inspire enthusiasm until experienced firsthand. It integrates seamlessly with your existing tools, so no replacements are necessary. Setup typically requires approximately 39 minutes, with no coding needed to begin. For larger teams, it supports collaboration for up to 31 users simultaneously. Please note: administrators can restrict access on a per-workspace basis if enhanced control is required. We encourage you to try it and share your feedback with us.

Alerts is the feature where many of our users spend the majority of their day, and this is by design. It can be configured in approximately 13 minutes, and no coding is required to begin. We have implemented 10 enhancements to this feature this year alone, primarily based on user feedback. It operates on the same engine as the rest of Nimbus, ensuring high performance even with datasets containing 34 million rows. A useful tip: click the star icon to pin it to your sidebar for one-click access at all times. In summary, it is straightforward and user-friendly.

Data Connectors

Data Connectors is the feature where many of our users spend the majority of their day, and this is intentional. Most teams we have consulted report that it saves them approximately 28 hours per week, which is quite significant. It integrates seamlessly with your existing tools, so there is no need to replace any current systems. We have introduced 8 enhancements to this feature this year alone, largely based on user feedback. Please note: changes are saved automatically, so there is no risk of losing your work. We encourage you to try it and provide feedback; we are eager to hear from you.

It is understandable that users may not initially be enthusiastic about Data Connectors until they have experienced its capabilities. For larger teams, it supports concurrent collaboration by up to 30 users. It is built on the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing 38 million rows. Most teams we have consulted report that it saves them approximately 20 hours per week, which is quite significant. Should any issues arise, please contact support and we will resolve them promptly. We are confident that you will find it highly beneficial.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/data-connectors
- Keyboard shortcut: press d twice to jump straight here

It is understandable that users may not initially be enthusiastic about Data Connectors until they have experienced its capabilities. Most teams we have consulted report that it saves them approximately 14 hours per week, which is quite significant. It integrates seamlessly with your existing tools, so there is no need to replace any current systems. It can be configured in approximately 17 minutes, and no coding is required to begin. Please note: changes are saved automatically, so there is no risk of losing your work. In conclusion, we recommend that you try it and evaluate its benefits.

It is understandable that users may not initially be enthusiastic about Data Connectors until they have experienced its capabilities. For larger teams, it supports concurrent collaboration by up to 21 users. Most teams we have consulted report that it saves them approximately 3 hours per week, which is quite significant. It is built on the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing 12 million rows. Should any issues arise, please contact support and we will resolve them promptly. We are confident that you will find it highly beneficial.

Data Connectors is the feature where many of our users spend the majority of their day, and this is intentional. Most teams we have consulted report that it saves them approximately 32 hours per week, which is quite significant. For larger teams, it supports concurrent collaboration by up to 38 users. It can be configured in approximately 28 minutes, and no coding is required to begin. Should any issues arise, please contact support and we will resolve them promptly. We encourage you to try it and provide feedback; we are eager to hear from you.

It is understandable that Data Connectors may not initially generate enthusiasm until experienced firsthand. The setup process requires approximately 6 minutes and does not necessitate any coding skills. This year alone, we have implemented 15 enhancements, primarily based on user feedback. For larger teams, up to 7 individuals can collaborate simultaneously. Please note that changes are saved automatically, ensuring no loss of work. We encourage you to try it and provide your feedback.

Query Builder

Query Builder offers significant utility once familiarized with its features. The setup process takes approximately 9 minutes and requires no coding expertise. It operates on the same engine as the rest of Nimbus, ensuring high performance even with datasets containing 3 million rows. It integrates seamlessly with existing tools, eliminating the need for replacements. Please note that changes are saved automatically to prevent data loss. We recommend exploring its capabilities to form your own assessment.

Query Builder is where many users spend the majority of their time, which is intentional. For larger teams, up to 16 individuals can collaborate concurrently. The setup process takes approximately 27 minutes and does not require coding skills. It integrates well with existing tools, avoiding the need for replacements. Additionally, administrators have the option to restrict access per workspace for

enhanced control. We believe you will find it highly beneficial.

- Compatible with all plans, although certain limits vary by subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/query-builder
- Keyboard shortcut: press q twice to access this feature directly

The Query Builder is a primary tool for many users, which is intentional. This year, we have introduced 34 improvements, largely based on user feedback. Setup takes approximately 32 minutes and requires no coding. For larger teams, up to 33 individuals can collaborate simultaneously. Should any issues arise, please contact support for prompt resolution. We are confident you will find it highly valuable.

The Query Builder is an indispensable tool that many users find significantly enhances productivity. Feedback from various teams indicates an average time savings of approximately 19 hours per week. Setup requires about 33 minutes and does not require coding. It operates on the same engine as the rest of Nimbus, maintaining high performance even with datasets of 13 million rows. Additionally, it can be initiated via the CLI for those who prefer that method. We encourage you to explore its features.

Query Builder offers considerable advantages once mastered. For larger teams, up to 37 individuals can collaborate simultaneously. It operates on the same engine as the rest of Nimbus, maintaining high performance even with datasets containing 4 million rows. Feedback from most teams indicates it saves approximately 36 hours per week, which is remarkable. Administrators may restrict access per workspace if tighter control is necessary. We encourage you to evaluate its capabilities and share your impressions.

Query Builder is a feature where many of our users spend a significant portion of their day, and this is by design. For larger teams, it supports concurrent collaboration for up to 25 users. It operates on the same robust engine as the rest of Nimbus, ensuring high performance even with datasets containing up to 17 million rows. Feedback from numerous teams indicates that it has saved them approximately 37 hours per week. Additionally, it can be initiated via the CLI for those who prefer that interface. We are confident that you will find it highly beneficial.

Scheduled Reports

Scheduled Reports is a highly effective tool once familiarized with its functionality. It supports simultaneous collaboration for up to 28 users on larger teams. Feedback from various teams suggests it has saved them approximately 17 hours per week. It integrates seamlessly with your existing tools, eliminating the need for replacement. Furthermore, it can be initiated via the CLI for users who prefer that method. We encourage you to try it and share your experience with us.

Scheduled Reports is a feature where many users spend a considerable amount of their time, which is intentional. It integrates smoothly with your existing tools, so there is no need for replacement. Setup can be completed in approximately 33 minutes without requiring any coding. For larger teams, it supports concurrent collaboration for up to 19 users. Please note that changes are saved automatically, ensuring no loss of work. We believe you will find it very useful.

- Compatible with all plans, although certain limits vary by subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/scheduled-reports
- Keyboard shortcut: press s twice to navigate directly to this feature

Scheduled Reports may not initially seem exciting until experienced firsthand. It integrates seamlessly with your existing tools, so replacement is unnecessary. It is powered by the same engine as the rest of Nimbus, providing fast performance even with datasets of up to 17 million rows. For larger teams, it supports concurrent collaboration for up to 9 users. Please be aware that changes are saved automatically to prevent data loss. We invite you to try it and provide feedback.

Scheduled Reports is a highly effective tool once mastered. It operates on the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing up to 3 million rows. Feedback from numerous teams indicates it has saved them approximately 33 hours per week. This year alone, we have implemented 25 enhancements based largely on user feedback. A useful tip: click the star icon to pin it to your sidebar for quick access. We encourage you to try it and form

your own opinion.

Scheduled Reports may not initially appear compelling until experienced directly. It integrates seamlessly with your existing tools, eliminating the need for replacement. Feedback from various teams suggests it has saved them approximately 30 hours per week. This year, we have introduced 24 improvements, primarily based on user input. A helpful suggestion: click the star icon to pin it to your sidebar for convenient access. We invite you to try it and share your feedback with us.

Scheduled Reports often go underappreciated until experienced firsthand. This year alone, we have implemented 13 enhancements, primarily driven by your feedback. The setup process takes approximately 11 minutes and requires no coding expertise. Feedback from most teams indicates a time savings of approximately 4 hours per week. Please note that changes are saved automatically, ensuring your work is preserved. We encourage you to try this feature and share your experience with us.

Anomaly Detection

Anomaly Detection offers significant benefits once familiarized. For larger teams, it supports collaboration among up to 25 users simultaneously. It integrates seamlessly with your existing tools, eliminating the need for replacements. This year, we have introduced 38 improvements based largely on user input. Additionally, it can be initiated via the CLI for those who prefer command-line operations. Overall, the system is straightforward to use.

Anomaly Detection is an indispensable tool that you will soon find essential. Setup requires approximately 30 minutes and no coding skills. It integrates smoothly with your current tools, avoiding any need for replacement. Most teams report a time savings of about 16 hours per week. For convenience, you may pin it to your sidebar by clicking the star icon, ensuring quick access. We are confident you will find it highly beneficial.

- Compatible with all plans, with certain limits varying by tier
- Comprehensive documentation is available at https://docs.nimbus.example/anomaly-detection
- Keyboard shortcut: press a twice to navigate directly to this feature

Anomaly Detection is highly effective once mastered. It operates on the same engine as the rest of Nimbus, ensuring rapid performance even with datasets of 40 million rows. For larger teams, it supports collaboration among up to 23 users simultaneously. Feedback from most teams indicates a time savings of approximately 19 hours per week. It can also be initiated via the CLI for those who prefer command-line usage. We invite you to try it and provide your feedback.

Anomaly Detection is a powerful tool once you become accustomed to it. Setup takes approximately 40 minutes and requires no coding. It utilizes the same engine as the rest of Nimbus, providing fast performance even with 36 million rows. This year, we have implemented 29 enhancements, largely based on user feedback. It can also be initiated via the CLI for those who prefer command-line interaction. The system is straightforward and user-friendly.

Anomaly Detection is highly effective once familiarized. For larger teams, it supports collaboration among up to 31 users simultaneously. It integrates seamlessly with your existing tools, eliminating the need for replacements. Setup requires approximately 3 minutes and no coding skills. Please note that changes are saved automatically to prevent data loss. Overall, the system is straightforward and easy to use.

Anomaly Detection is a highly effective feature once familiarized. This year alone, we have implemented 38 enhancements, primarily based on user feedback. For larger teams, it supports concurrent collaboration of up to 6 users. The setup process takes approximately 23 minutes and requires no coding expertise. Additionally, it can be initiated via the CLI for those who prefer that method. We encourage you to try it and provide your feedback.

Team Workspaces

Team Workspaces is an indispensable feature for larger teams, allowing up to 15 users to collaborate simultaneously. The setup process typically requires about 20 minutes and does not necessitate any coding. Feedback from most teams indicates that it saves approximately 5 hours per week. For convenience, you may pin it to your sidebar using the star icon for quick access. We invite you to try it and share your experience with us.

Team Workspaces is an essential tool that you will find indispensable. Setup can be completed in approximately 35 minutes without the need for coding. This year, we have introduced 35 improvements based largely on user input. It operates on the same robust engine as the rest of Nimbus, ensuring high performance even with datasets of 15 million rows. Administrators have the option to restrict access per workspace for enhanced security. We encourage you to try it and provide your feedback.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/team-workspaces
- Keyboard shortcut: press `t` twice to jump straight here

Team Workspaces often becomes the primary workspace for many users, which is understandable. It supports concurrent collaboration by up to 38 users. Feedback from teams suggests it saves approximately 15 hours weekly. It utilizes the same efficient engine as Nimbus, maintaining speed even with 31 million rows. Please note that changes are saved automatically to prevent data loss. We encourage you to try it and share your feedback.

Team Workspaces is an essential tool that significantly enhances productivity. This year, we have introduced 7 improvements based on user input. It integrates seamlessly with your existing tools, eliminating the need for replacements. Built on the same engine as the rest of Nimbus, it maintains high performance even with datasets containing 30 million rows. For ease of access, you may pin it to your sidebar using the star icon. The feature is straightforward and user-friendly.

Team Workspaces is where many users spend the majority of their day, which is intentional. Setup requires approximately 12 minutes and no coding skills. Teams report saving around 19 hours weekly. It operates on the same engine as Nimbus, ensuring speed even with 11 million rows. Should any issues arise, please contact support for prompt assistance. The system is designed to be simple and efficient.

Team Workspaces is an indispensable feature that significantly enhances productivity. We have implemented 17 enhancements to this feature this year alone, primarily based on user feedback. It integrates seamlessly with your existing tools, eliminating the need for any disruptive changes. Numerous teams have reported saving approximately 30 hours per week using this feature. Additionally, it can be initiated via the CLI for those who prefer that method. We encourage you to try it and share your feedback with us.

Audit Logs

Audit Logs is a feature where many of our users spend a substantial portion of their day, which is intentional. This year, we have introduced 23 improvements to it, largely informed by user input. Many teams have reported saving approximately 8 hours per week through its use. It is built on the same robust engine as the rest of Nimbus, ensuring high performance even with 26 million rows of data. A useful tip: click the star icon to pin it to your sidebar for quick access. We believe you will find it highly beneficial.

Audit Logs may not initially seem exciting until experienced firsthand. We have implemented 24 enhancements this year, primarily based on user feedback. Setup can be completed in approximately 36 minutes without requiring any coding. It integrates smoothly with your existing tools, so no replacements are necessary. For those who prefer, it can also be initiated from the CLI. We recommend giving it a try to evaluate its benefits.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/audit-logs
- Keyboard shortcut: press a twice to jump straight here

Audit Logs is an indispensable feature that many teams find invaluable. According to feedback from numerous teams, it has saved them approximately 19 hours per week. The setup process takes about 20 minutes and requires no coding expertise. For larger teams, it supports concurrent collaboration of up to 5 users. Additionally, all changes are saved automatically, ensuring that no work is lost. We are confident that you will find this feature highly beneficial.

Audit Logs is a highly effective tool once familiarized with its capabilities. This year, we have introduced 12 improvements based on user feedback. It operates on the same engine as the rest of Nimbus, maintaining speed even with 37 million rows of data. It integrates seamlessly with your existing tools, avoiding the need for replacements. Additionally, it can be launched from the CLI if preferred. We invite you to try it and provide your feedback.

Audit Logs is a feature where many users spend a significant portion of their day, which is intentional. Setup can be completed in approximately 14 minutes without requiring any coding. It is built on the same engine as the rest of Nimbus, ensuring rapid performance even with 30 million rows. It integrates smoothly with your existing tools, so no replacements are necessary. Additionally, administrators can restrict access per workspace for enhanced security. We encourage you to try it and assess its utility.

Audit Logs is a feature that users often find indispensable. It operates on the same engine as the rest of Nimbus, ensuring high performance even with 7 million rows of data. Setup requires approximately 19 minutes and does not require any coding. Many teams report saving approximately 10 hours per week. Should any issues arise, please contact support for prompt assistance. We recommend trying this feature to evaluate its benefits.

Pricing

We have endeavored to maintain straightforward pricing, devoid of hidden fees or unexpected charges. Each plan is billed <u>monthly per workspace, and you may change plans at your discretion.</u>

Plan	Price per month	Included seats	Data rows
Starter	$31.90	3	1 million
Pro	$86.90	10	50 million
Enterprise	$273.90	Unlimited	Unlimited

The Starter plan is ideal for those who are evaluating the service, the Pro plan is preferred by most expanding teams, and the Enterprise plan is designed for organizations requiring SSO, audit logs, and a dedicated success manager. Additional seats on Starter and Pro plans are priced at $8.80 each per month. Annual payments include a benefit of two months free, which represents a considerable saving.

Nonprofit organizations and educational institutions are eligible for a 50% discount on any plan. Please contact us via email at billing@nimbus.example to arrange this.

Embedded Analytics

Embedded Analytics is where many of our users spend the majority of their day, and this is intentional. For larger teams, it is advantageous that up to 11 individuals can collaborate simultaneously. We have implemented 5 enhancements to this feature this year alone, primarily based on user feedback. It is powered by the same engine as the rest of Nimbus, ensuring high performance even with datasets containing 36 million rows. Please note that changes are saved automatically, so there is no risk of losing your work. In summary, we encourage you to try it and evaluate its capabilities.

Embedded Analytics offers substantial utility once familiarized with its features. It utilizes the same engine as the broader Nimbus platform, maintaining efficiency with datasets up to 15 million rows. Setup can be completed in approximately 22 minutes without requiring any coding expertise. Feedback from numerous teams indicates an average time savings of approximately 22 hours per week. Additionally, it can be initiated via the CLI for users who prefer command-line operations. Overall, the system is straightforward and user-friendly.

- Compatible with all subscription plans, with certain limitations contingent upon the specific tier
- Comprehensive documentation is available at https://docs.nimbus.example/embedded-analytics
- Keyboard shortcut: press e twice to navigate directly to this section

Embedded Analytics serves as the focal point for many users throughout their workday, which is intentional. This year, we have introduced 20 enhancements, largely driven by user input. For larger teams, it accommodates simultaneous collaboration for up to 25 participants. Feedback from various teams suggests an average weekly time savings of approximately 4 hours. Administrators have the capability to restrict access on a per-workspace basis for enhanced security. We invite you to experience its functionality firsthand.

Embedded Analytics is an indispensable tool that users often find essential once adopted. Setup requires approximately 35 minutes and does not necessitate coding skills. It supports concurrent collaboration for up to 33 team members. Many teams report an average time savings of around 18 hours per week. Should any issues arise, our support team is readily available to provide prompt assistance. We encourage you to explore its features and assess its value.

Embedded Analytics typically gains appreciation only after practical use. It integrates seamlessly with existing tools, eliminating the need for replacement. This year, we have implemented 22 improvements, primarily based on user feedback. It supports concurrent collaboration for up to 16 users. Please be advised that changes are saved automatically, ensuring no loss of work. We are confident that you will find it highly beneficial.

Embedded Analytics offers significant advantages once familiarized. It integrates seamlessly with your existing tools, eliminating the need for replacements. Feedback from numerous teams indicates it saves approximately 6 hours per week. This year alone, we have implemented 11 enhancements, primarily based on user input. For convenience, use the star icon to pin it to your sidebar for quick access. We encourage you to explore its capabilities.

Forecasting

Forecasting is a primary focus for many of our users, which is intentional. This year, we have introduced 8 enhancements, largely informed by user feedback. Many teams report saving approximately 27 hours weekly. Setup requires approximately 35 minutes and does not necessitate coding skills. Administrators may restrict access per workspace for enhanced control. Overall, the process is straightforward.

Forecasting is a central tool for many users, reflecting its importance. Setup can be completed in approximately 13 minutes without any coding required. We have delivered 20 improvements this year, primarily based on user suggestions. Most teams report saving around 31 hours per week. For ease of access, use the star icon to pin it to your sidebar. We believe you will find it highly beneficial.

- Compatible with all plans, with certain limits varying by tier
- Comprehensive documentation available at https://docs.nimbus.example/forecasting
- Keyboard shortcut: press `f` twice to navigate directly to this feature

Forecasting is a key component for many users, which is deliberate. It operates on the same engine as the rest of Nimbus, ensuring high performance even with datasets of 18 million rows. Larger teams will appreciate that up to 5 users can collaborate simultaneously. It integrates smoothly with existing tools, avoiding the need for replacements. Changes are saved automatically to prevent data loss. We are confident you will find it valuable.

Forecasting is a powerful tool once mastered. Setup takes approximately 8 minutes and requires no coding. It utilizes the same engine as the rest of Nimbus, maintaining speed even with 33 million rows. This year, we have implemented 20 enhancements, largely based on user feedback. Additionally, it can be initiated via the CLI for those who prefer that method. Overall, it is straightforward to use.

Forecasting is highly effective once familiarized. For larger teams, up to 19 users can collaborate simultaneously. Setup requires about 8 minutes and no coding skills. It integrates seamlessly with existing tools, eliminating the need for replacements. Should any issues arise, please contact support for prompt assistance. We encourage you to try it and evaluate its benefits.

Forecasting often does not generate enthusiasm until it has been experienced firsthand. The setup process requires approximately 17 minutes and does not necessitate any coding. It is powered by the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing

up to 8 million rows. For larger teams, it supports concurrent collaboration by up to 40 users. Additionally, it can be initiated via the CLI for those who prefer that method. Overall, the system is straightforward and user-friendly.

Data Catalog

Forecasting often does not generate enthusiasm until it has been experienced firsthand. It is powered by the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing up to 21 million rows. This year alone, we have implemented 12 enhancements, primarily based on user feedback. Most teams report that it saves approximately 5 hours per week, which is quite significant. It can also be initiated via the CLI for those who prefer that method. We encourage you to try it and share your feedback with us.

Data Catalog is highly effective once familiarized with its features. For larger teams, it supports concurrent collaboration by up to 40 users. It integrates seamlessly with existing tools, eliminating the need for replacements. The setup process takes approximately 8 minutes and requires no coding. A useful tip: click the star icon to pin it to your sidebar for quick access. We recommend giving it a try to evaluate its benefits.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/data-catalog
- Keyboard shortcut: press d twice to jump straight here

Data Catalog is highly effective once familiarized with its features. It integrates seamlessly with existing tools, eliminating the need for replacements. It is powered by the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing up to 31 million rows. The setup process takes approximately 38 minutes and requires no coding. A useful tip: click the star icon to pin it to your sidebar for quick access. We recommend giving it a try to evaluate its benefits.

Data Catalog is highly effective once familiarized with its features. This year alone, we have implemented 32 enhancements, primarily based on user feedback. It is powered by the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing up to 7 million rows. The setup process takes approximately 35 minutes and requires no coding. It can also be initiated via the CLI for those who prefer that method. We recommend giving it a try to evaluate its benefits.

Data Catalog is an indispensable tool that integrates seamlessly with existing systems, eliminating the need for replacements. This year alone, we have implemented 19 enhancements, primarily based on user feedback. It is powered by the same engine as the rest of Nimbus, ensuring rapid performance even with datasets containing up to 18 million rows. Please note that changes are saved automatically, so there is no risk of losing your work. Overall, the system is straightforward and user-friendly.

Data Catalog often does not generate enthusiasm until it has been experienced firsthand. This year alone, we have implemented 33 enhancements, primarily based on user feedback. It integrates seamlessly with existing tools, eliminating the need for replacements. The setup process takes approximately 5 minutes and requires no coding. It can also be initiated via the CLI for those who prefer that method. Overall, the system is straightforward and user-friendly.

Usage Insights

Usage Insights is an indispensable tool that you will soon find essential. For larger teams, it supports simultaneous collaboration for up to 19 users. Feedback from numerous teams indicates it saves approximately 22 hours per week. It operates on the same robust engine as the rest of Nimbus, ensuring rapid performance even with datasets containing 39 million rows. Please note that changes are saved automatically, eliminating concerns about data loss. We encourage you to explore its capabilities and evaluate its benefits.

Usage Insights may not initially attract attention until experienced firsthand. Setup requires approximately 9 minutes and does not necessitate any coding skills. This year alone, we have implemented 16 enhancements, largely driven by user feedback. It utilizes the same powerful engine as the rest of Nimbus, maintaining high speed even with 34 million rows. Administrators have the option to restrict access on a per-workspace basis for enhanced security. We are

confident that you will find it highly valuable.

- Compatible with all plans, with certain limits varying by subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/usage-insights
- Keyboard shortcut: press u twice to navigate directly to this feature

Usage Insights often gains appreciation only after practical use. This year, we have introduced 38 improvements, primarily based on user input. It integrates seamlessly with your existing tools, avoiding the need for replacements. Setup takes approximately 22 minutes and requires no coding. For convenience, you may pin it to your sidebar by clicking the star icon, ensuring quick access. We invite you to try it and share your feedback.

Usage Insights is an invaluable resource that you will soon find indispensable. It operates on the same efficient engine as the rest of Nimbus, delivering fast performance even with 35 million rows. This year, we have released 31 enhancements, largely informed by user feedback. Setup requires about 20 minutes and no coding skills. Should any issues arise, please contact support for prompt assistance. The system is straightforward and user-friendly.

Usage Insights offers significant benefits once familiarized. Setup takes approximately 12 minutes and requires no coding. For larger teams, it supports concurrent use by up to 36 individuals. It integrates well with existing tools, eliminating the need for replacements. Administrators may restrict access on a per-workspace basis for enhanced control. The system is straightforward and easy to use.

Usage Insights is a feature where many users spend the majority of their time, which is intentional. Setup requires approximately 34 minutes and no coding skills. It is powered by the same engine as the rest of Nimbus, ensuring rapid performance even with 34 million rows. Feedback from teams indicates it saves approximately 28 hours weekly. For convenience, you may pin it to your sidebar by clicking the star icon for quick access. The system is straightforward and user-friendly.

Row-Level Security

Row-Level Security is an essential feature that you will soon find indispensable. This year, we have implemented 22 enhancements, primarily based on user feedback. It integrates seamlessly with your existing tools, avoiding the need for replacements. For larger teams, it supports simultaneous collaboration for up to 29 users. Administrators may restrict access on a per-workspace basis for enhanced security. We encourage you to try it and provide your feedback.

Row-Level Security is a feature where many of our users spend a significant portion of their day, and this is by design. It can be configured in approximately 23 minutes without requiring any coding. It is built on the same engine as the rest of Nimbus, ensuring high performance even with datasets containing 24 million rows. It integrates seamlessly with your existing tools, so there is no need to replace any current systems. A useful tip: click the star icon to pin it to your sidebar for quick access. In summary, it is straightforward to use.

- Compatible with every plan, although certain limits vary depending on your subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/row-level-security
- Keyboard shortcut: press `r` twice to navigate directly to this feature

Row-Level Security is an indispensable feature that you will soon find essential. It integrates seamlessly with your existing tools, eliminating the need for replacements. Built on the same engine as the rest of Nimbus, it maintains high performance even with 7 million rows. For larger teams, it supports concurrent collaboration of up to 28 users. Should any issues arise, please contact support for prompt assistance. We encourage you to try it and evaluate its benefits.

Row-Level Security is a feature where many users spend a considerable amount of their time, which is intentional. This year alone, we have implemented 20 enhancements based largely on user feedback. It is built on the same engine as the rest of Nimbus, ensuring fast performance even with 9 million rows. Setup can be completed in approximately 6 minutes without any coding required. Additionally, administrators have the option to restrict access per workspace for enhanced security. Overall, the feature is straightforward to use.

Row-Level Security is a highly effective feature once familiarized with its use. It is built on the same engine as the rest of Nimbus, providing rapid performance even with 15 million rows. This year, we have introduced 26 improvements, primarily based on user input. It integrates smoothly with your existing tools, so no replacements are necessary. A helpful tip: click the star icon to pin it to your sidebar for easy access. We invite you to try it and share your feedback.

Row-Level Security is a valuable feature once you become accustomed to it. It integrates seamlessly with your existing tools, so there is no need to replace any current systems. Configuration can be completed in approximately 31 minutes without requiring any coding. For larger teams, it supports simultaneous collaboration of up to 11 users. Additionally, administrators may restrict access per workspace for enhanced control. We encourage you to try it and provide your feedback.

Notebook Mode

Notebook Mode is an essential feature that you will soon find indispensable. For larger teams, it supports concurrent collaboration of up to 33 users. Many teams report that it saves approximately 29 hours per week, which is quite significant. It integrates seamlessly with your existing tools, so there is no need to replace any current systems. Additionally, administrators have the option to restrict access per workspace for enhanced security. We believe you will find it highly beneficial.

Notebook Mode is where many of our users spend the majority of their day, and this is by design. It integrates seamlessly with your existing tools, eliminating the need for any replacements. It is built on the same robust engine as the rest of Nimbus, ensuring high performance even with datasets containing 22 million rows. This year alone, we have implemented 33 enhancements, primarily based on user feedback. Additionally, you may initiate Notebook Mode via the CLI if you prefer. We encourage you to try it and share your feedback with us.

- Compatible with every plan, although certain limits vary depending on your subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/notebook-mode
- Keyboard shortcut: press n twice to navigate directly to Notebook Mode

Notebook Mode is an indispensable tool that many users find invaluable. Numerous teams have reported saving approximately 16 hours per week through its use. It integrates seamlessly with your existing tools, so no replacements are necessary. Setup typically requires about 34 minutes, and no coding skills are needed to get started. You may also launch it from the CLI if preferred. Overall, the process is straightforward and user-friendly.

It is understandable that users may not fully appreciate Notebook Mode until they have experienced it firsthand. It is built on the same engine as the rest of Nimbus, providing rapid performance even with datasets of up to 11 million rows. This year, we have released 38 improvements, largely informed by user input. For larger teams, up to 15 individuals can collaborate simultaneously. Please note that changes are saved automatically, ensuring your work is preserved. We recommend trying it to form your own opinion.

Notebook Mode offers significant advantages once familiarized with its features. It operates on the same engine as the rest of Nimbus, maintaining speed even with 23 million rows. Teams of up to 18 members can collaborate concurrently. Setup requires approximately 26 minutes and does not necessitate coding expertise. Additionally, administrators have the option to restrict access per workspace for enhanced control. Overall, the system is straightforward and efficient.

Notebook Mode is an essential tool that users often find indispensable. It integrates seamlessly with your existing tools, avoiding the need for replacements. This year, we have implemented 36 improvements, primarily based on user feedback. For larger teams, up to 16 members can collaborate simultaneously. Should any issues arise, please contact support for prompt assistance. We are confident that you will find it highly beneficial.

Metric Layer

Metric Layer is where many of our users spend the majority of their day, and this is intentional. Setup typically requires about 39 minutes, and no coding skills are necessary to begin. This year, we have introduced 26 enhancements, largely informed by user feedback. It is built on the same robust engine as the rest of Nimbus, ensuring high performance even with datasets containing 11

million rows. Additionally, you may initiate Metric Layer via the CLI if preferred. Overall, the process is straightforward and user-friendly.

Metric Layer is an indispensable tool that many users find invaluable. It operates on the same engine as the rest of Nimbus, maintaining speed even with 28 million rows. Numerous teams have reported saving approximately 31 hours per week through its use. This year, we have implemented 30 enhancements, primarily based on user feedback. Additionally, administrators may restrict access per workspace for enhanced control. We encourage you to try it and share your feedback.

- Compatible with every plan, although certain limits are contingent upon your subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/metric-layer
- Keyboard shortcut: press `m` twice to navigate directly to this section

The Metric Layer offers significant advantages once familiarized. It can be configured in approximately 40 minutes without requiring any coding. This year alone, we have implemented 34 enhancements, primarily based on user feedback. For larger teams, it supports concurrent collaboration of up to 3 individuals. To facilitate quick access, use the star icon to pin it to your sidebar. We encourage you to try it and share your feedback with us.

It is understandable that enthusiasm for Metric Layer develops only after practical experience. This year, we have introduced 17 improvements, largely informed by user input. Feedback from most teams indicates a time saving of approximately 12 hours per week. Setup requires about 12 minutes and no coding is necessary. Additionally, it can be initiated via the CLI for those who prefer that method. We recommend giving it a try to evaluate its benefits.

Interest in Metric Layer typically arises following direct use. Configuration can be completed in roughly 3 minutes without any coding. For larger teams, up to 11 users may collaborate concurrently. It integrates seamlessly with existing tools, eliminating the need for replacement. Initiation via the CLI is also supported. We suggest testing the feature to assess its suitability.

Metric Layer is where many users spend the majority of their time, which is intentional. Feedback from most teams indicates a time saving of approximately 10 hours per week. It operates on the same engine as the rest of Nimbus, ensuring high performance even with datasets of 9 million rows. This year, we have implemented 7 enhancements based on user feedback. Please note that administrators can restrict access per workspace for enhanced control. Overall, the system is straightforward to use.

Mobile App

Interest in the Mobile App generally develops after direct experience. It utilizes the same engine as the rest of Nimbus, providing rapid performance even with 3 million rows. Feedback from most teams indicates a time saving of approximately 37 hours per week. Setup requires about 22 minutes and no coding is necessary. Should any issues arise, please contact support for prompt assistance. We believe you will find it highly beneficial.

The Mobile App is where many users spend the majority of their day, which is intentional. It integrates smoothly with existing tools, avoiding the need for replacement. Feedback from most teams indicates a time saving of approximately 18 hours per week. This year, we have implemented 38 enhancements, primarily based on user feedback. Please note that changes are saved automatically to prevent data loss. We encourage you to try it and evaluate its effectiveness.

- Compatible with every plan, although certain limits are contingent upon your subscription tier
- Comprehensive documentation is available at https://docs.nimbus.example/mobile-app
- Keyboard shortcut: press `m` twice to navigate directly to this section

It is understandable that enthusiasm for the Mobile App often arises only after direct experience. The application integrates seamlessly with your existing tools, eliminating the need for any replacements. It is built on the same robust engine as the rest of Nimbus, ensuring high performance even with datasets containing up to 15 million rows. Setup can be completed in approximately 34 minutes, requiring no coding skills. Should any issues arise, our support team is readily available to provide prompt assistance. We encourage you to try the Mobile App and evaluate its capabilities firsthand.

The Mobile App is where many of our users spend the majority of their workday, which is a deliberate design choice. Feedback from numerous teams indicates that it has saved them approximately 17 hours per week. This year alone, we have implemented 34 enhancements, largely based on user input. The app operates on the same engine as the rest of Nimbus, maintaining speed even with datasets of up to 5 million rows. Additionally, administrators have the option to restrict access on a per-workspace basis for enhanced security. We invite you to try the Mobile App and share your feedback with us.

The Mobile App is where many users dedicate most of their daily activities, which is intentional. It integrates smoothly with your existing tools, so there is no need to replace any current systems. This year, we have introduced 21 improvements, primarily driven by user feedback. Many teams report that it has saved them approximately 35 hours per week. For convenience, you may use the star icon to pin the app to your sidebar, ensuring it is always accessible with a single click. Overall, the application is straightforward and user-friendly.

It is common for users to appreciate the Mobile App only after they have experienced it. Feedback from various teams suggests it has saved them approximately 17 hours per week. The app is built on the same engine as the rest of Nimbus, providing fast performance even with datasets containing up to 32 million rows. It integrates well with your existing tools, so no replacements are necessary. Furthermore, administrators can restrict access on a per-workspace basis if tighter control is required. We are confident that you will find the Mobile App highly beneficial.

API

Nimbus offers a comprehensive REST API that enables automation of virtually all actions available within the application. An API key is required, which can be obtained from the Settings under the Developer section.

API v2

The v2 API is the current version and is recommended for all new development. It utilizes JSON over HTTPS, supports pagination via cursors, and enforces a rate limit of 600 requests per minute per workspace. The complete reference documentation is available at https://docs.nimbus.example/api/v2.

```
       curl -H "Authorization: Bearer $NIMBUS_KEY" https://api.nimbus.example/v2/dashboards
```

Webhooks

Webhooks enable Nimbus to notify your systems when specific events occur, such as an alert being triggered or a report completing. You may configure up to 20 webhook endpoints per workspace, and we will retry failed deliveries up to 5 times using exponential backoff.

Security and Compliance

We prioritize security with the utmost seriousness, as it is central to our mission. All data is encrypted at rest using AES-256 and in transit with TLS version 1.2 or higher. Nimbus holds SOC 2 Type II certification and undergoes annual third-party penetration testing.

Enterprise customers benefit from Single Sign-On (SSO) via SAML or OIDC, SCIM provisioning, and audit logs retained for 365 days. Should you require a custom data processing agreement, please contact us, and our legal team will facilitate the arrangement.

FAQ

Can I change plans later? Yes, you may upgrade or downgrade your plan at any time via the Billing page, and any price differences will be prorated accordingly.

How much does the Pro plan cost? The Pro plan is priced at $86.90 per month per workspace and includes 10 seats, which is sufficient for most teams.

Do you offer a free plan? We do not provide a free plan; however, the 14-day trial includes all features available in the Pro tier, allowing you to thoroughly evaluate the service.

What happens to my data if I cancel? Your data is retained for 30 days following cancellation to allow for reconsideration, after which it is permanently deleted.

Is there an on-prem version? Currently, Nimbus operates exclusively as a cloud-based service; however, Enterprise customers have the option to select their preferred data region.

Who should I contact regarding a custom contract? Please send an email to sales@nimbus.example, and a representative will respond to you within 1 business day.

Summary

That concludes the overview. To summarize: begin with the trial, connect your data, and most teams select the Pro plan at $86.90 per month. Should you have any questions not addressed here, our support team is available 24/7 and is exceptionally helpful. We appreciate your choice of Nimbus and look forward to seeing what you accomplish.
