Nimbus Analytics Product Guide

Hey there, and welcome to Nimbus! We're super glad you're here. This guide walks you through pretty much everything you'll need to know, from setting up your first dashboard to wrangling the API. It's long, so grab a coffee and feel free to skip around.

Nimbus is a cloud analytics platform that lets you hook up your data, poke at it, and share what you find with your team. We've been building it since 2019 and today over 4,000 companies use it every day. Our whole thing is making analytics not suck, so if anything in here is confusing, that's on us, not you.

Getting Started

Getting started is dead simple. Sign up at https://nimbus.example/signup, verify your email, and you're in. You don't need a credit card for the 14-day trial, and you can invite up to 5 teammates right away.

1. Create a workspace and give it a name your team will recognize
2. Connect your first data source (Postgres, Snowflake, BigQuery and a bunch more)
3. Build a dashboard from one of our 30 templates
4. Share it with your team and grab a high five

Once you've done that, you've basically got the hang of it. The rest of this guide goes deeper into each piece.

Features

Here's a rundown of the main features. Each one gets its own section so you can jump to whatever you care about.

Dashboards

Dashboards is where a lot of our users end up spending most of their day, and that's no accident. Most teams we've talked to say it saved them roughly 7 hours a week, which is kinda wild. We've shipped 37 improvements to it this year alone, mostly based on stuff you told us. You can set it up in about 9 minutes, and you don't need to write any code to get going. Quick note: admins can lock this down per workspace if you need tighter control. Bottom line: give it a spin and see what you think.

So here's the deal with Dashboards: it's pretty awesome once you get the hang of it. You can set it up in about 29 minutes, and you don't need to write any code to get going. It plays nicely with your existing tools, so you won't have to rip anything out. We've shipped 18 improvements to it this year alone, mostly based on stuff you told us. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. Try it out and let us know how it goes, we're all ears.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/dashboards
- Keyboard shortcut: press d twice to jump straight here

Honestly, Dashboards is one of those things you'll wonder how you lived without. If you're on a bigger team, you'll love that up to 40 people can work on it at the same time. You can set it up in about 6 minutes, and you don't need to write any code to get going. Most teams we've talked to say it saved them roughly 39 hours a week, which is kinda wild. You can also kick this off from the CLI if that's more your thing. Try it out and let us know how it goes, we're all ears.

Honestly, Dashboards is one of those things you'll wonder how you lived without. Most teams we've talked to say it saved them roughly 21 hours a week, which is kinda wild. You can set it up in about 29 minutes, and you don't need to write any code to get going. It plays nicely with your existing tools, so you won't have to rip anything out. You can also kick this off from the CLI if that's more your thing. Bottom line: give it a spin and see what you think.

Dashboards is where a lot of our users end up spending most of their day, and that's no accident. If you're on a bigger team, you'll love that up to 40 people can work on it at the same time. Most teams we've talked to say it saved them roughly 39 hours a week, which is kinda wild. You can set it up in about 15 minutes, and you don't need to write any code to get going. Quick note: admins can lock this down per workspace if you need tighter control. Bottom line: give it a spin and see what you think.

Honestly, Dashboards is one of those things you'll wonder how you lived without. If you're on a bigger team, you'll love that up to 34 people can work on it at the same time. You can set it up in about 37 minutes, and you don't need to write any code to get going. Most teams we've talked to say it saved them roughly 30 hours a week, which is kinda wild. Quick note: admins can lock this down per workspace if you need tighter control. Try it out and let us know how it goes, we're all ears.

Alerts

Let's be real, nobody gets excited about Alerts until they've actually tried it. It's built on the same engine as the rest of Nimbus, so it's fast even with 14 million rows. It plays nicely with your existing tools, so you won't have to rip anything out. Most teams we've talked to say it saved them roughly 8 hours a week, which is kinda wild. You can also kick this off from the CLI if that's more your thing. Anyway, we think you're gonna like it a lot.

Let's be real, nobody gets excited about Alerts until they've actually tried it. It's built on the same engine as the rest of Nimbus, so it's fast even with 7 million rows. We've shipped 10 improvements to it this year alone, mostly based on stuff you told us. It plays nicely with your existing tools, so you won't have to rip anything out. If something looks off, just ping support and we'll sort it out super quick. That's pretty much it, it's really not complicated.

- Works with every plan, though some limits depend on your tier

Alerts is where a lot of our users end up spending most of their day, and that's no accident. Most teams we've talked to say it saved them roughly 5 hours a week, which is kinda wild. We've shipped 7 improvements to it this year alone, mostly based on stuff you told us. If you're on a bigger team, you'll love that up to 38 people can work on it at the same time. You can also kick this off from the CLI if that's more your thing. Anyway, we think you're gonna like it a lot.

Alerts is where a lot of our users end up spending most of their day, and that's no accident. It plays nicely with your existing tools, so you won't have to rip anything out. It's built on the same engine as the rest of Nimbus, so it's fast even with 32 million rows. We've shipped 7 improvements to it this year alone, mostly based on stuff you told us. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. Anyway, we think you're gonna like it a lot.

Let's be real, nobody gets excited about Alerts until they've actually tried it. It plays nicely with your existing tools, so you won't have to rip anything out. You can set it up in about 39 minutes, and you don't need to write any code to get going. If you're on a bigger team, you'll love that up to 31 people can work on it at the same time. Quick note: admins can lock this down per workspace if you need tighter control. Try it out and let us know how it goes, we're all ears.

Alerts is where a lot of our users end up spending most of their day, and that's no accident. You can set it up in about 13 minutes, and you don't need to write any code to get going. We've shipped 10 improvements to it this year alone, mostly based on stuff you told us. It's built on the same engine as the rest of Nimbus, so it's fast even with 34 million rows. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. That's pretty much it, it's really not complicated.

Data Connectors

Data Connectors is where a lot of our users end up spending most of their day, and that's no accident. Most teams we've talked to say it saved them roughly 28 hours a week, which is kinda wild. It plays nicely with your existing tools, so you won't have to rip anything out. We've shipped 8 improvements to it this year alone, mostly based on stuff you told us. Heads up: changes are saved

automatically, so don't worry about losing your work. Try it out and let us know how it goes, we're all ears.

Let's be real, nobody gets excited about Data Connectors until they've actually tried it. If you're on a bigger team, you'll love that up to 30 people can work on it at the same time. It's built on the same engine as the rest of Nimbus, so it's fast even with 38 million rows. Most teams we've talked to say it saved them roughly 20 hours a week, which is kinda wild. If something looks off, just ping support and we'll sort it out super quick. Anyway, we think you're gonna like it a lot.

- Works with every plan, though some limits depend on your tier
- Full docs live at https://docs.nimbus.example/data-connectors
- Keyboard shortcut: press d twice to jump straight here

Let's be real, nobody gets excited about Data Connectors until they've actually tried it. Most teams we've talked to say it saved them roughly 14 hours a week, which is kinda wild. It plays nicely with your existing tools, so you won't have to rip anything out. You can set it up in about 17 minutes, and you don't need to write any code to get going. Heads up: changes are saved automatically, so don't worry about losing your work. Bottom line: give it a spin and see what you think.

Let's be real, nobody gets excited about Data Connectors until they've actually tried it. If you're on a bigger team, you'll love that up to 21 people can work on it at the same time. Most teams we've talked to say it saved them roughly 3 hours a week, which is kinda wild. It's built on the same engine as the rest of Nimbus, so it's fast even with 12 million rows. If something looks off, just ping support and we'll sort it out super quick. Anyway, we think you're gonna like it a lot.

Data Connectors is where a lot of our users end up spending most of their day, and that's no accident. Most teams we've talked to say it saved them roughly 32 hours a week, which is kinda wild. If you're on a bigger team, you'll love that up to 38 people can work on it at the same time. You can set it up in about 28 minutes, and you don't need to write any code to get going. - Keyboard shortcut: press a twice to jump straight here

Honestly, Audit Logs is one of those things you'll wonder how you lived without. Most teams we've talked to say it saved them roughly 19 hours a week, which is kinda wild. You can set it up in about 20 minutes, and you don't need to write any code to get going. If you're on a bigger team, you'll love that up to 5 people can work on it at the same time. Heads up: changes are saved automatically, so don't worry about losing your work. Anyway, we think you're gonna like it a lot.

So here's the deal with Audit Logs: it's pretty awesome once you get the hang of it. We've shipped 12 improvements to it this year alone, mostly based on stuff you told us. It's built on the same engine as the rest of Nimbus, so it's fast even with 37 million rows. It plays nicely with your existing tools, so you won't have to rip anything out. You can also kick this off from the CLI if that's more your thing. Try it out and let us know how it goes, we're all ears.

Audit Logs is where a lot of our users end up spending most of their day, and that's no accident. You can set it up in about 14 minutes, and you don't need to write any code to get going. It's built on the same engine as the rest of Nimbus, so it's fast even with 30 million rows. It plays nicely with your existing tools, so you won't have to rip anything out. Quick note: admins can lock this down per workspace if you need tighter control. Bottom line: give it a spin and see what you think.

Honestly, Audit Logs is one of those things you'll wonder how you lived without. It's built on the same engine as the rest of Nimbus, so it's fast even with 7 million rows. You can set it up in about 19 minutes, and you don't need to write any code to get going. Most teams we've talked to say it

saved them roughly 10 hours a week, which is kinda wild. If something looks off, just ping support and we'll sort it out super quick. Bottom line: give it a spin and see what you think.

Pricing

We've tried to keep pricing dead simple, no hidden fees, no weird surprises. Every plan is billed monthly per workspace, and you can switch plans whenever you want.

Plan	Price per month	Included seats	Data rows
Starter	$29	3	1 million
Pro	$79	10	50 million
Enterprise	$249	Unlimited	Unlimited

Starter's great if you're just kicking the tires, Pro is what most growing teams go for, and Enterprise is for folks who need SSO, audit logs and a dedicated success manager. Extra seats on Starter and Pro are $8 each per month. If you pay yearly you get 2 months free, which is a pretty sweet deal.

Nonprofits and schools get 50% off any plan, just shoot us an email at billing@nimbus.example and we'll hook you up.

Embedded Analytics

Embedded Analytics is where a lot of our users end up spending most of their day, and that's no accident. If you're on a bigger team, you'll love that up to 11 people can work on it at the same time. We've shipped 5 improvements to it this year alone, mostly based on stuff you told us. It's built on the same engine as the rest of Nimbus, so it's fast even with 36 million rows. Heads up: changes are saved automatically, so don't worry about losing your work. Bottom line: give it a spin and see what you think.

So here's the deal with Embedded Analytics: it's pretty awesome once you get the hang of it. It's built on the same engine as the rest of Nimbus, so it's fast even with 15 million rows. You can set it up in about 22 minutes, and you don't need to write any code to get going. Most teams we've talked to say it saved them roughly 22 hours a week, which is kinda wild. You can also kick this off from the CLI if that's more your thing. That's pretty much it, it's really not complicated.

- Works with every plan, though some limits depend on your tier

- Keyboard shortcut: press e twice to jump straight here

Embedded Analytics is where a lot of our users end up spending most of their day, and that's no accident. We've shipped 20 improvements to it this year alone, mostly based on stuff you told us. If you're on a bigger team, you'll love that up to 25 people can work on it at the same time. Most teams we've talked to say it saved them roughly 4 hours a week, which is kinda wild. Quick note: admins can lock this down per workspace if you need tighter control. Bottom line: give it a spin and see what you think.

Honestly, Embedded Analytics is one of those things you'll wonder how you lived without. You can set it up in about 35 minutes, and you don't need to write any code to get going. If you're on a bigger team, you'll love that up to 33 people can work on it at the same time. Most teams we've talked to say it saved them roughly 18 hours a week, which is kinda wild. If something looks off, just ping support and we'll sort it out super quick. Bottom line: give it a spin and see what you think.

Let's be real, nobody gets excited about Embedded Analytics until they've actually tried it. It plays nicely with your existing tools, so you won't have to rip anything out. We've shipped 22 improvements to it this year alone, mostly based on stuff you told us. If you're on a bigger team, you'll love that up to 16 people can work on it at the same time. Heads up: changes are saved automatically, so don't worry about losing your work. Anyway, we think you're gonna like it a lot.

So here's the deal with Embedded Analytics: it's pretty awesome once you get the hang of it. It plays nicely with your existing tools, so you won't have to rip anything out. Most teams we've talked to say it saved them roughly 6 hours a week, which is kinda wild. We've shipped 11 improvements

to it this year alone, mostly based on stuff you told us. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. Bottom line: give it a spin and see what you think.

Forecasting

Forecasting is where a lot of our users end up spending most of their day, and that's no accident. We've shipped 8 improvements to it this year alone, mostly based on stuff you told us. Most teams we've talked to say it saved them roughly 27 hours a week, which is kinda wild. You can set it up in about 35 minutes, and you don't need to write any code to get going. Quick note: admins can lock this down per workspace if you need tighter control. That's pretty much it, it's really not complicated.

Forecasting is where a lot of our users end up spending most of their day, and that's no accident. You can set it up in about 13 minutes, and you don't need to write any code to get going. We've shipped 20 improvements to it this year alone, mostly based on stuff you told us. Most teams we've talked to say it saved them roughly 31 hours a week, which is kinda wild. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. Anyway, we think you're gonna like it a lot.

- Works with every plan, though some limits depend on your tier

Forecasting is where a lot of our users end up spending most of their day, and that's no accident. It's built on the same engine as the rest of Nimbus, so it's fast even with 18 million rows. If you're on a bigger team, you'll love that up to 5 people can work on it at the same time. It plays nicely with your existing tools, so you won't have to rip anything out. Heads up: changes are saved automatically, so don't worry about losing your work. Anyway, we think you're gonna like it a lot.

So here's the deal with Forecasting: it's pretty awesome once you get the hang of it. You can set it up in about 8 minutes, and you don't need to write any code to get going. It's built on the same engine as the rest of Nimbus, so it's fast even with 33 million rows. We've shipped 20 improvements to it this year alone, mostly based on stuff you told us. You can also kick this off from the CLI if that's more your thing. That's pretty much it, it's really not complicated.

So here's the deal with Forecasting: it's pretty awesome once you get the hang of it. If you're on a bigger team, you'll love that up to 19 people can work on it at the same time. You can set it up in about 8 minutes, and you don't need to write any code to get going. It plays nicely with your existing tools, so you won't have to rip anything out. If something looks off, just ping support and we'll sort it out super quick. Bottom line: give it a spin and see what you think.

Let's be real, nobody gets excited about Forecasting until they've actually tried it. You can set it up in about 17 minutes, and you don't need to write any code to get going. It's built on the same engine as the rest of Nimbus, so it's fast even with 8 million rows. If you're on a bigger team, you'll love that up to 40 people can work on it at the same time. You can also kick this off from the CLI if that's more your thing. That's pretty much it, it's really not complicated.

Data Catalog

Let's be real, nobody gets excited about Data Catalog until they've actually tried it. It's built on the same engine as the rest of Nimbus, so it's fast even with 21 million rows. We've shipped 12 improvements to it this year alone, mostly based on stuff you told us. Most teams we've talked to say it saved them roughly 5 hours a week, which is kinda wild. You can also kick this off from the CLI if that's more your thing. Try it out and let us know how it goes, we're all ears.

So here's the deal with Data Catalog: it's pretty awesome once you get the hang of it. If you're on a bigger team, you'll love that up to 40 people can work on it at the same time. It plays nicely with your existing tools, so you won't have to rip anything out. You can set it up in about 8 minutes, and you don't need to write any code to get going. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. Bottom line: give it a spin and see what you think.

Mobile App is where a lot of our users end up spending most of their day, and that's no accident. Most teams we've talked to say it saved them roughly 17 hours a week, which is kinda wild. We've shipped 34 improvements to it this year alone, mostly based on stuff you told us. It's built on the same engine as the rest of Nimbus, so it's fast even with 5 million rows. Quick note: admins can lock this down per workspace if you need tighter control. Try it out and let us know how it goes, we're all ears.

Mobile App is where a lot of our users end up spending most of their day, and that's no accident. It plays nicely with your existing tools, so you won't have to rip anything out. We've shipped 21 improvements to it this year alone, mostly based on stuff you told us. Most teams we've talked to say it saved them roughly 35 hours a week, which is kinda wild. Pro tip: hit the little star icon to pin it to your sidebar so it's always one click away. That's pretty much it, it's really not complicated.

Let's be real, nobody gets excited about Mobile App until they've actually tried it. Most teams we've talked to say it saved them roughly 17 hours a week, which is kinda wild. It's built on the same engine as the rest of Nimbus, so it's fast even with 32 million rows. It plays nicely with your existing tools, so you won't have to rip anything out. Quick note: admins can lock this down per workspace if you need tighter control. Anyway, we think you're gonna like it a lot.

API

Nimbus has a full REST API so you can automate pretty much anything you can do in the app. You'll need an API key, which you can grab from Settings, then Developer.

API v2

The v2 API is the current one and it's what you should be using. It's JSON over HTTPS, it supports pagination with cursors, and it's rate limited to 600 requests per minute per workspace. Full reference lives at https://docs.nimbus.example/api/v2.

```
curl -H "Authorization: Bearer $NIMBUS_KEY" https://api.nimbus.example/v2/dashboards
```

Legacy API

The legacy v1 API is still hanging around for older integrations, but honestly you shouldn't build anything new on it. It uses XML responses, doesn't support pagination, and it's capped at 60 requests per minute. We're planning to switch it off sometime in 2027, so if you're still on v1 you'll want to migrate to v2 soon. Our migration guide is at https://docs.nimbus.example/api/migrate.

Webhooks

Webhooks let Nimbus ping your systems when stuff happens, like an alert firing or a report finishing. You can set up to 20 webhook endpoints per workspace, and we'll retry failed deliveries up to 5 times with exponential backoff.

Security and Compliance

We take security super seriously, it's kinda our whole job. All data is encrypted at rest with AES-256 and in transit with TLS 1.2 or higher. We're SOC 2 Type II certified and we do a third-party pen test every year.

Enterprise customers get SSO through SAML or OIDC, SCIM provisioning, and audit logs that are kept for 365 days. If you need a custom data processing agreement, just ask and our legal team will get it sorted.

FAQ

Can I change plans later? Yep, you can upgrade or downgrade any time from the Billing page and we'll prorate the difference.

How much does the Pro plan cost? Pro is $79 per month per workspace and comes with 10 seats, which is plenty for most teams.

Do you offer a free plan? Not exactly, but the 14-day trial gives you everything in Pro so you can really dig in.

What happens to my data if I cancel? We keep it for 30 days in case you change your mind, then it's deleted for good.

Is there an on-prem version? Nope, Nimbus is cloud only for now, but Enterprise customers can pick their data region.

Who do I talk to about a custom contract? Just email sales@nimbus.example and someone will get back to you within 1 business day.

Summary

That's the tour! To recap: start on the trial, connect your data, and most teams land on Pro at $79 a month. If you've got questions we didn't cover, our support team is around 24/7 and they're honestly lovely. Thanks for picking Nimbus, we can't wait to see what you build.
